

Milestone 1 Report

Project Title: Azure Usage Forecasting

1. Introduction

This project focuses on forecasting Azure compute and storage usage using historical and external datasets.

Milestone 1 establishes the foundation through data collection and preparation.

2. Objective

The objective of this milestone is to collect relevant datasets, clean them, and prepare them for further processing and modeling.

3. Datasets Used

Raw Dataset: economic_data.xlsx.xlsx

Cleaned Dataset: economic_data_cleaned.csv

4. Data Collection

External economic indicators were collected to understand factors influencing Azure usage demand.

The dataset was loaded using Python and Pandas.

5. Data Cleaning & Preparation

- Missing values were identified and handled
- Duplicate records were removed
- Column formats and data types were standardized
- Cleaned data was saved in CSV format

6. Tools Used

Python, Pandas, NumPy, Google Colab, GitHub

7. Outcome

The dataset is now clean, validated, and ready for feature engineering and data wrangling in Milestone 2.

8. Conclusion

Milestone 1 has been successfully completed and provides a strong base for subsequent project stages.
